METHOD OF OPERATION
LINE CIRCUIT

Various Answering Jack Arrangements - Special "A" Switchboard - Full Mechanical
Power Driven System.

GENERAL DESCRIPTION

1. These circuits are used at a special "A" switchboard. They show the connection of various arrangements of jacks and lamps to be used with incoming lines from the final selector frame.
2. The connections to the jack or jacks and one connection to the #2-G lamp, or lamps, terminate at the V.I.D.F. where they are cross connected to a line circuit, which terminates at a blank, discontinued, denied service, or any other line whose incoming service is required to be interrupted.
